

## Week of 5/27/2019 Operations Update

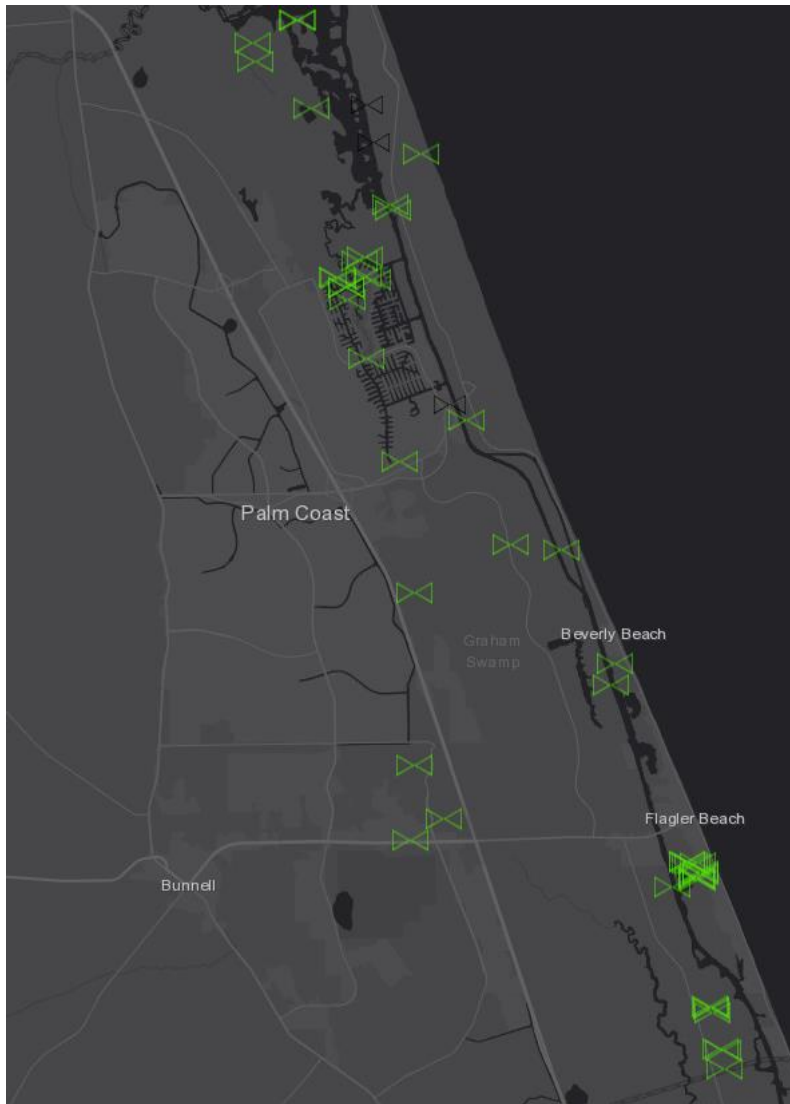

Third week in a row of consistently low mosquito population. The stacked-bar graph below shows the total mosquitoes from all traps in the District in white. The red is the sole trap we keep on the West-side of US-1 to monitor outside the District.

Of the 1389 sites monitored by ground in the District only 131 have water in them.

Breeding was found at 52 ground sites the month of May. First pre-treatments of salt marsh areas were done on May 1.

No adulticide treatments this week.
