

Week of 10/25/2021 Operations Update

Some cooler weather before Halloween limited mosquito activity. The bar graph below shows the total adult mosquitoes from all traps in the District for the past year (TTM).

The most prevalent mosquito species trapped in the District this week was *Culex nigripalpus* (graph below). Only one zone South of HWY 100 within the District warranted treatment.

Zones highlighted in yellow on the map below were sprayed by truck this week.
