

Week of 8/21/2023 Operations Update (34)

Mosquito activity was primarily in one zone this week. The bar graph below shows the total number of adult mosquitoes from all traps in the District for the past year (TTM).

Several floodwater species and prevalent *Culex nigripalpus* were abundant in one zone with adulticiding performed in just that zone.

Town Center, Zone C7, has multiple building projects ongoing and this may have been the causal factor for the focused abundance in just one location this week.
